

The Blackfoot River Watershed (western Montana): The Blackfoot Challenge is a "grass roots" group that consists of private landowners, local, federal and state agency representatives, and several corporate landowners. The restoration approach used in the Blackfoot combines education, non-native weed control, and habitat restoration projects including 83 miles of instream and riparian restoration, 2,100 acres of wetlands restored, and 2,300 acres of native grasslands restored.

The 12 restoration showcase watersheds were selected for their use of stream corridor restoration technology to improve the community, the environment, and water quality as endorsed in the Clean Water Action Plan. They represent a variety of geographic locations and conditions, a balance of management practice and technical design, strong local, tribal or state leadership, and partnership in stream corridor restoration.
